

Winchendon School Classroom Connector

Winchendon, MA

This facility is a Single-story, 628sf +/-, structural steel frame and aluminum storefront glass building, approximately 15-feet high. This connector building was designed to reduce the schools energy consumption, as well as provide a gather and study area for the students. While providing a well light, warm and inviting appearance that would not overwhelm the original two classroom buildings.

- A lot of natural light
- Highlight existing building materials
- Gathering and study space
- Energy conservative
